🌐 Portfolio

Summary

Backend-focused Software Engineer with hands-on experience building scalable systems in Python, Django, DRF and FastAPI — including REST APIs, background task processing and cloud-deployed services. Also comfortable across the stack, contributing to React.js web interfaces and Flutter mobile apps, with working experience integrating LLM-powered features into production applications. Familiar with AWS, Docker and CI/CD pipelines for deployment, and used to owning a problem end-to-end — from data model to deployment — while collaborating directly with teams and stakeholders.

Skills

Backend & APIs

Python Django DRF FastAPI REST API Design JWT Auth WebSockets Celery

AI / LLM Engineering

LLM Integration Prompt Design Structured Output Parsing Vision/Image-based LLM Processing Third-Party AI API Integration

Cloud & DevOps

AWS (EC2, S3, RDS, IAM, SQS) Docker CI/CD (GitHub Actions) MobaXterm Linux

Data & Messaging

PostgreSQL MySQL SQLite Memcache Redis RabbitMQ ORM & Query Optimization

Tools & Practice

Git & GitHub Postman Code Reviews Testing Agile Collaboration Claude Codex Trae Kiro Freebuff

Full-Stack Capability

React.js Flutter & Dart Firebase Supabase PWA (Progressive Web App) Google Maps API

Experience

Software Engineer — Dark Bytes

Jan 2026 – Present

- Architect and develop scalable backend systems and RESTful APIs using Python, Django & FastAPI for production workloads.
- Integrate AWS services (EC2, S3, RDS, IAM) and Docker-based deployment workflows to support cloud-native infrastructure.
- Optimize database queries, schema design, and Celery/Redis background task processing for high-traffic endpoints.
- Contribute to CI/CD pipelines and deployment automation, and collaborate on cross-functional feature delivery.

Associate Software Engineer — IT Genesis

Jan 2025 – Dec 2025

- Built and maintained REST APIs with Python, Django & DRF, integrating Firebase Auth, Firestore and Cloud Messaging.
- Developed cross-platform Flutter applications consuming backend APIs, with real-time data sync over WebSockets.
- Implemented Google Maps integration for location-based features shipped to production.
- Followed clean architecture principles across mobile and backend layers to keep the codebase maintainable.

Python/Django Intern — Developers Hub Corporation

Oct 2024 – Dec 2024

- Assisted in developing and maintaining backend features in Python and Django within an agile team environment.
- Built and tested REST API endpoints, contributing to CRUD operations, data validation and serialization logic.
- Worked with SQL databases (MySQL/PostgreSQL) to support application data models and queries.
- Participated in code reviews and Git-based version control practices, building strong foundational engineering habits.

Projects

CoinSnap — AI-Powered Coin Identification App

Flutter · Python · Django · FastAPI · LLM Integration · Firebase Auth

- Built a Flutter app with email/password and Google Sign-In authentication, backed by a Django/FastAPI service layer for image-based coin identification.
- Integrated an LLM vision pipeline returning structured coin details — history, price, weight and size — from captured images.

AI Health Assistant

Python · Django/FastAPI · LLM Integration · Prompt Engineering

- Built an LLM-powered assistant that interprets natural-language health queries and returns contextual, structured guidance.
- Designed the backend prompt-orchestration and API integration layer connecting the app to the language model.

Trading Platform — Real-Time Trading Application

React.js · Django · DRF · PostgreSQL · JWT

- Built a React.js + Django REST Framework platform for real-time market data, trade execution and portfolio tracking.
- Implemented secure authentication and optimized backend performance for reliable transaction handling.

Live Chat System — Real-Time Messaging Platform

Django Channels · WebSockets · Redis · PostgreSQL · Firebase FCM

- Built a real-time messaging app with one-to-one and group chat, presence indicators and typing status over WebSockets.
- Focused on low-latency delivery and scalable backend architecture using Django Channels and Redis.

Enterprise CRM

React.js · Django · DRF · PostgreSQL · RBAC

- Built a CRM centralizing customer interactions, sales pipelines and support tickets with role-based access control.
- Designed scalable REST APIs and optimized database performance for enterprise-scale use.

Bonope POS — Cloud Point of Sale System

React.js · Django · DRF · PostgreSQL · Offline Sync

- Built a retail POS system with sales management, inventory tracking, offline sync and barcode scanning.
- Designed efficient backend services with secure authentication and optimized database operations.

Education

University of Sargodha, Pakistan

Apr 2021 – May 2025

Bachelor of Science in Computer Science — CGPA 3.65 / 4.00
